LivingTime® Enables Busy Parents to Capture Memorable Moments

Redwood City, California — May 11, 2005 — Scrapbooking is fun. Journaling is therapeutic. And capturing digital photographs and movies can be an artistic experience. But what can busy parents do when they don't have the time to invest in any of these things but still want to capture the personal memories of their family and children?

LivingTime lets parents (and kids) create a personalized timeline, complete with journal entries, photographs and mini movies. It's easy to use, and once entries are made, easy to sort through and find events that are important to you. It only takes a few seconds to document memorable moments and significant events. You can print the entries at any time.

In addition to composing a well-documented family history, the program provides access to thousands of world events that can be imported to provide additional richness and perspective to the act of remembering one's experiences. There are many journaling, diary, blogging, personal website, photo capture, and slide show programs available online and in software but no other program incorporates ALL of the elements parents want. LivingTime also offers the security parents demand.

About LivingTime

Created by Lifescape Inc., LivingTime is a software program for recording and charting the memorable moments and events of a person's life. Users create a personalized timeline, complete with journal entries, photographs and small videos. In addition, users can import thousands of world events to help document the personalized memory. Lifescape Inc. is located in Redwood City, California, and can be found on the Web at www.lifescape.com. For more information about LivingTime, visit www.livingtime.com, or call (650) 368-8448.
